

PC100 Series

PC100 Series

Metal Sealed, Ultra-High Purity
Pressure Controllers with Flow Measurement

PC100 Series serves a broad range of applications including electronic pressure regulation, bubbler head-pressure control, ballast gas pressure control, pressure balancing and dilution lines in deposition. Designed for semiconductor and MOCVD applications, PC100 Series delivers outstanding performance, reliability, and system simplicity to reduce gas consumption and associated abatement costs. Unlike traditional pressure control devices, the PC125 Pressure Controller leverages the mass flow measurement capability and accuracy of the GF100 Thermal Mass Flow Meter.

Features and Benefits

- High-purity, corrosion resistant metal sealed flow path
- Fast settling and response time for improved pressure control
- Upstream and downstream pressure control configurations
- Supports multiple connections: Analog 0-5 Vdc, RS485 and DeviceNet™ communication protocols
- High visibility LCD gives local indication of device performance
- Option for flow monitoring using ultra-stable thermal sensor
- User programmable start-up function for processes requiring a slow ramped pressure control
- In-line device evaluation and instantaneous troubleshooting resulting in reduced downtime
- Zero button to easily re-zero the device during scheduled maintenance
- Full scale ranges from 3 sccm to 10 slm (N₂ Equivalent)

Service and Support

Brooks is committed to assuring all of our customers receive the ideal pressure controllers for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards.

Visit www.BrooksInstrument.com to locate the service location nearest to you.

START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

SEMINARS AND TRAINING

Brooks Instrument can provide customer seminars and dedicated training to engineers, end users, and maintenance persons. Please contact your nearest sales representative for more details. Due to Brooks Instrument's commitment to continuous improvement of our products, all specifications are subject to change without notice.
